BUILDING STRONG LEARNING FOUNDATIONS

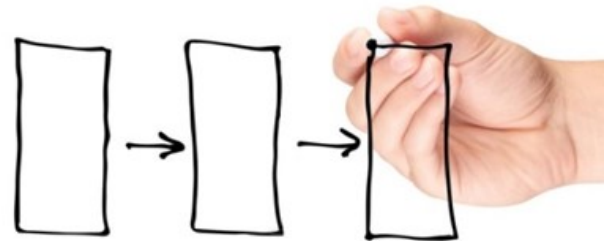

Brain Frames®

Graphic scaffolds for language, literacy, teaching, and learning

Worksheets and writing are linear, but thinking is multi-dimensional. What can teachers use to bridge this gap? Brain Frames!

What are they? A set of flexible graphics that visually represent the patterns of thinking and language. They allow teachers and students to see their ideas as well as the relationships between them.

With Brain Frames, teachers have powerful tools to support students' listening, speaking, reading, writing, note taking, studying, critical thinking, and problem solving. And students have a way to show what they know and understand about themselves and the world.

Teachers and students in all grades and all content areas can use Brain Frames to organize their language in real time – to sequence ideas, show relationships between concepts, explain why, and more. By drawing them, they take full control of showing the depth and breadth of their thinking across the curriculum..

ARE YOU IN?

General and special educators teaching grades pre-K through 12 who want to strengthen critical thinking and language in ANY content area, this training is absolutely for you!

WHEN? February 7 and 8, 2019 · 8:30 - 3:30
